#### **DETAILED ACTION**

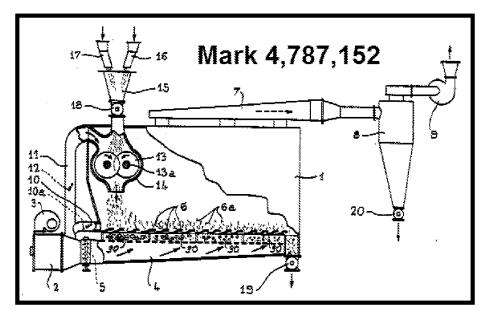

## Allowable Subject Matter

Process claims 1-2 are allowable.

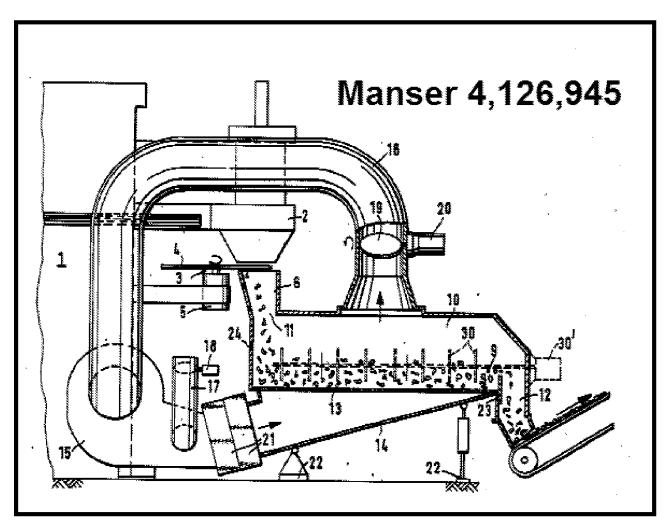

### Claim Rejections - 35 USC § 102

Claims **3-6** and **8** are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over any of **Cohan (US 5,653,872)** or **Mark (US 4,787,152)** or **Manser (US 4,126,945)**.

Art Unit: 1797

As understood, the structure of apparatus claims **3-6** and **8** is seen to be met by the systems disclosed by any of **Cohan**, **Mark** or **Manser**. It is submitted that any limitations not express are inherent, or alternatively, obvious in view of that which is conventionally known in the art.

#### Response to Arguments

Applicant's arguments filed **April 6**, **2009** have been fully considered but they are not persuasive. Against "apparatus" claims **3-6** and **8**, Applicant has argued:

The process of claims 1 and 3 provide for the production of finished granules in a granulation fluid bed. A granulation fluid bed is a fluid bed where the granules are continuously made to grow (in volume and mass) from a seed to the finished granule (see for example, page 1, lines 21-27 of the specification.) In none of the cited documents a granulation fluid bed is disclosed or suggested for obtaining the granules.

The process of claims 1 and 3 also provide for transferring the finished granules from the granulation fluid bed in a pressurized space below the granulation fluid bed by falling of the finished granules thorough suitable sized opening of a base plate supporting said granulation fluid bed. The process of claims 1 and 3 further provide for collecting the finished granules falling from the granulation fluid bed in the below pressurized space, in a second fluid bed, which is formed and maintained exploiting at least part of the fluidification air used for the granulation fluid bed.

These features are clearly missing from Cohan, Mark and Manser, in which a single fluid bed is disclosed, and the base plate supporting such a fluid bed is not provided with suitable sized openings for the falling of the granules.

The process of claim 1 limitly provides for the extraction of the finished granules from the pressurized space to the outside by means of a well arranged outside the pressurized space and in fluid communication with the second, collection fluid bed. Again, all cited references are allent about this feature, and instead they disclose conventional systems for the mechanical extraction of granules. In Cohan a chain type conveyor 30 is used; in Mark an airlock 19 is used while in Monser a conveyer belt is used.

For the foregoing reasons, claims I and 3 are patentable over the prior art. Dependent claims 2, and 4-7 are also believed to be allowable because of their dependence upon an allowable base claim, and because of the further features recited

Claims **3-6** and **8** are "apparatus" claims, not "process" claims. Applicant has failed to articulate how the structure of the instant claims defines over the applied references.

Application/Control Number: 10/562,503 Page 5

Art Unit: 1797

Conclusion

Applicant's amendment (i.e., addition of Claim 8) necessitated the new ground(s)

of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE

FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy

as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to /Robert James

Popovics/ at telephone number (571) 272-1164.
